

Conduit Clamps

One-piece simplicity changes everything.

These nylon-based conduit clamps utilize HellermannTyton's patented, size-adjustable Ratchet Clamp platform. They conveniently ratchet closed to fit multiple conduit diameters, reducing part inventory.

Their patented design speeds installation versus other common alternatives:

- For strut mounting of flexible metal and non-metal conduit, the one-piece Quick2Clamp twists into the channel with no additional fasteners.
- Threaded Rod Clamp support rigid metal conduit and goes on without any additional hardware.
- Our Bolt Mount Ratchet Clamp support rigid conduit and is available for low- and high-torque applications.
- All clamps can be preloaded to save a critical step at the installation site.

Installers will appreciate that HellermannTyton Conduit Clamps have a safety factor of 3, are UL2239 Listed and contain no PVC or halogens.
